- ◆ Mobile Phone Web Browsers.
- ◆ SmartPhone & Mobile Applications.
- ◆ Tablets and Slates.

Through a flexible and intelligent integration engine, AcumenMobile will publish your existing content to mobile users across multiple platforms and devices for true anywhere access.

Mobile Publishing

With mobile web capabilities you can publish content to the widest possible user audience, across the widest Mobile Devices, SmartPhones and Tablets.

Delivering fast and efficient content publishing ensures users can access content from wireless networks, 3G, GPRS and EDGE Networks. Optimised for Mobile Device Web Browsers, native applications or tablets; your users can seamlessly access educational content from any location. With a simple plug and play capability you can integrate

AcumenMobile with existing knowledge bases and e-learning platforms for real-time access to content.

Peer to Peer Publishing

Through the AcumenMobile Peer to Peer Publishing Module, medical institutions, departments or specialties can publish evidence, findings, reports and learning information for other peers or students to access for continuing learning.

Knowledge can be easily shared amongst medical peers through intuitive internet based publishing capabilities allowing for real-time content delivery and feedback.

Accreditation Portfolio

Managing the ongoing development of clinical accreditations, publications, education and evidence requires new technologies to allow individual control and publication of information. With the AcumenMobile Accreditation Portfolio, clinicians can maintain an ongoing portfolio of accreditations, publications, knowledge sources and information for future publication.

Content Feedback

At a click of a button, your users can rate and provide feedback on the content consumed. Over a short period of time a knowledge-base of content suitability, usability and value can be automatically gained to inform future return on investment and content usage.

Modular Based

At the heart of the AcumenMobile Platform is the ability to deploy modules on-demand, as required.
